Defect Log

Defect Number	Defect	Output Before Seeding	Output After Seeding	Suggested Correction	Severity
1	Users cannot add foods with spaces to 'MyFoods' without the app crashing after the next access of the home menu	App runs normally after adding foods with spaces in them to My Foods.	App crashes after adding a food with spaces in it to My Foods and then accessing the home menu.	Change API call to include spaces in the request.	2
2	Hours does not return start hours to the Client window.	Menu tab will display start and end hours on the left sidebar.	Menu tab will not display start hours on the left sidebar.	Change JSP file to parse start hours.	3
3	Dining Court address does not display properly.	Address for dining court displays on the dining court menu window with proper formatting and spaces.	Address displays with parts of the address jumbled up and distorted.	Handle address parsing using a JSON library.	3
4	Users cannot access the menu directly without accessing	Users are able to access menus using menu routes	App will crash if user attempts to access the menu directly	Handle menu request directly in the servlet file.	3

	the home page first.	in browser.	instead of from the home route.		

5	Menu carousel html is improperly formatted.	Arrow buttons appear on the left and right sides of the carousel.	The arrow buttons show up in the wrong spots.	Edit home JSP file.	3

6	Empty "The Gathering Place" menu is not handled properly.	Upon clicking on "The Gathering Place" from the home window, an empty menu should display.	The app will crash upon clicking on "The Gathering Place" menu from the home window.	Check for null response from API request.	3

7	Late Lunch and other meals that aren't breakfast lunch or dinner don't display.	Upon clicking on any dining court menu from the home menu, all meals will display	Upon clicking on any dining court menu from the home menu, only meals such as Breakfast, Lunch and Dinner will display in the sidebar.	Make meal requests from the API dynamic.	3

8	Notification bar doesn't scroll down past first notification.	Upon clicking on the home page, items stored in My Foods should	Notifications bar remains static.	Edit JSP file to make ticker dynamic.	3

		display in the notifications bar and scroll down.			

9	Users cannot access MyFoods window directly without accessing the home page first.	After running the app, the user can go to the My Foods route directly.	Attempting to visit the My Foods route directly after running the app will cause the application to crash.	Edit the servlet to set initialization on home servlet.	2

10	Users cannot access preferences window directly without accessing the home page first.	After running the app, the user can go to the preferences settings route directly.	Attempting to visit the preferences route directly after running the app will cause the application to crash.	Edit the servlet to allow for preferences to be edited directly without the home menu.	2

11	Preferences dialog box says "Add an exclusion".	From the preferences menu, the dialog placeholder for adding a preference says "Add a preference"	From the preferences menu, the dialog placeholder for adding a preference says "Add an exclusion"	Fix the value for the preferences dialog box in the jsp file for preferences.	3

12	Cannot remove exclusions	After adding an exclusion in the	After adding an exclusion in the	Edit JSP file to remove preferences	3

	after being added.	preferences menu, it can be unchecked and automatically removed.	preferences menu, unchecking it will not do anything.	upon checking the box.	

13	Add preference and exclusion buttons still say "Button".	Button next to preference and exclusion dialog boxes says "Add"	Button next to preference still says "Button".	Edit the HTML file to properly update the value to "Add"	3

14	Every food has eggs.	All foods correspond to unique allergens.	All foods contain eggs as an allergen.	Edit Foods module to dynamically save allergens instead of using a boolean for each allergen.	3

15	All hours for meals are the same.	All meal times in the menu have unique serving times.	All meal times display 11:59pm, the latest possible time in the day.	Edit Hours module to properly convert a string from the dining court api and convert it to localtime.	3

16	Waiting Time range does not display.	Range for waiting time displays on	Waiting time does not display on	Parse dining court API for approximate	3

		the lefthand sidebar on a given menu page.	the page.	waiting time and send that data to the JSP file.	

17	Cannot remove preferences after being added.	After adding a preference in the preferences menu, it can be unchecked and automatically removed.	After adding a preference in the preferences menu, unchecking it will not do anything	Edit servlet to handle removal of items.	3

18	No foods marked as vegetarian.	Users are able to have menus only display vegetarian foods by adding a preference in the preferences menu.	Adding a preference for vegetarian only doesn't remove any foods.	Remove the boolean variable for vegetarian in the food module and add it to the preferences map.	3

19	App does not have stars next to foods in Firefox.	Users can check stars next to foods on a menu in any popular browser	Users can only add foods to My Foods when opened in chrome.	Change HTML to include support for firefox.	3

20	Dining court names on home menu	Dining court names display on	Dining court names do not display on	Change parse request to	2

	do not display properly.	home page as they do in the Purdue dining court API	the home page as they do in the Purdue dining court API	properly grab dining court names.	

21	Dining court names do not match up to corresponding dining court from the home menu page	Hillenbrand link leads to the Hillenbrand page from the home window.	Earhart link leads to the Hillenbrand page from the home window	Change the JSP file to properly match dining court names.	2

22	Two "MyFoods" options display from a Menu window.	Menu link displays link to "Preferences" and "MyFoods" from Menu window	Menu displays two links called "MyFoods"	Change JSP to render names to corresponding links	2

23	Clicking on preferences from preferences menu displays a new page	Clicking on preferences from preferences menu does not change window.	"Preferences" link clicked from preferences menu redirects to main window.	Change preferences servlet to properly handle redirection.	2

24	Home button does not redirect to the home page from	Clicking the home button would redirect you to the home	Clicking on the menu button does not redirect to the home	Change JSP file for the button to to include an href to	2

	the MyFoods window	route	route from the MyFoods menu	"/home"	

25	"BoilerHungry" Title does not display from the "MyFoods" menu	On the MyFoods menu, the "BoilerHungry" title does displays	On the MyFoods menu, the "BoilerHungry" title does not display	Change the JSP to properly render the predetermined template.	2
